

Virtual Social Hour

presents

Dillon Lees

Who the heck is this jabroni??

- BloodHound Enterprise Dev Team
- Father of Five
- Army Veteran
- Musician
- Super Nerd

Background

- Born in Cuyahoga Falls, Ohio
- Military 2006 - 2011
 - Fort Bragg
 - Pacific Asia
- Resides in Holly Springs, North Carolina
- IBM
- SpecterOps

Technological Passions and/or things I use

- All things Kubernetes
- Merkle Trees/DAGs
- Blockchain
- New Programming Languages
- vim/neovim
- tmux
- please
- zsh
 - zinit
- Bazel

What I mean when I say my terminal looks like a spaceship

The image shows a Mac desktop environment with several open windows:

- Terminal Windows:** There are four distinct terminal windows. One window displays Go code from a file named `client_id.go`. Another window shows a command-line session with various API requests and responses. A third window contains a large amount of log output from a service named `bhe`, which includes numerous error messages and status codes. The fourth window shows a command-line session for running a vault key.
- Slack Window:** A Slack window titled "Spectre Ops" is visible, showing a message from "husky" about a pre-commit check.
- Docker Desktop:** The Docker desktop interface is open, showing a cluster named "docker-desktop". It lists several services and their deployment status. One service, "dns-webui", is highlighted in blue, indicating it is ready. Other services listed include "nginx-ingress", "default", "redis", "memcached", "k8s", "Logs", and "Metrics".
